The Innate and Acquired Immune System of Bony Fish. The immune system is a set of cellular and humoral components to defend the body against foreign substances, such as microorganisms, toxins or malignant cells, responding to factors such as endogenous or exogenous components that stimulate this system.

Fish Immunology. The modification and manipulation of the

The complement system is a part of the immune system that enhances (complements) the ability of antibodies and phagocytic cells to clear microbes and damaged cells from an organism, promotes inflammation, and attacks the pathogen's cell membrane. It is part of the innate immune system, which is not adaptable and does not change over the course of an individual's lifetime.

Complement system - Wikipedia

An Fc receptor is a protein found on the surface of certain cells – including, among others, B lymphocytes, follicular dendritic cells, natural killer cells, macrophages, neutrophils, eosinophils, basophils, human platelets, and mast cells – that contribute to the protective functions of the immune system. Its name is derived from its binding specificity for a part of an antibody known as ...

Sia l'immunità innata che quella adattativa, dipendono dalla capacità del sistema immunitario di distinguere tra molecole self e non-self. Nell'immunologia, le molecole self sono quelle che compongono l'organismo e che possono essere distinte dalle sostanze estranee dal sistema immunitario. Al contrario, le molecole non-self, sono quelle riconosciute come molecole estranee.

Sistema immunitario - Wikipedia

Il sistema immunitario è un sistema di difesa che protegge l'organismo dalle infezioni e dalle malattie. È composto da cellule e molecole che lavorano insieme per riconoscere e eliminare i patogeni.

La seconda zona di precipitazione

The second zone is the equivalence zone, also the zone of maximal precipitation in which antigen and antibody form large insoluble complexes and there is neither antigen nor antibody present in the supernatant.
