An aircraft is a machine that is able to fly by gaining support from the air. It counters the force of gravity by using either static lift or by using the dynamic lift of an airfoil, or in a few cases the downward thrust from jet engines. Common examples of aircraft include airplanes, helicopters, airships (including blimps), gliders, and hot air balloons. ...

"It is with the submarine that the initiative and full freedom of the seas rests. The aircraft carrier, whatever realistic scenario of action is drawn--that of operations in great waters or of amphibious support close to shore--will be exposed to a wider range of threat than the submarine must face.
