Unit 18 Trusses: Method of Joints Frame 18-1 \*Introduction A truss is a structure composed of several members joined at their ends so as to form a

### **Unit 18 Trusses: Method of Joints**

The simplest form of a truss is one single triangle. This type of truss is seen in a framed roof consisting of rafters and a ceiling joist, and in other mechanical structures such as bicycles and aircraft. Because of the stability of this shape and the methods of analysis used to calculate the forces within it, a truss composed entirely of triangles is known as a simple truss.

As one of the methods of structural analysis, the direct stiffness method, also known as the matrix stiffness method, is particularly suited for computer-automated analysis of complex structures including the statically indeterminate type. It is a matrix method that makes use of the members' stiffness relations for computing member forces and displacements in structures.

Finding Maigret programmes on British TV 1/8/02 - If you download DigiGuide ([www.digiguide.com](http://www.digiguide.com)) you will get two weeks of TV listings for all TV channels in the UK. One very good feature of this is a word search facility. Just by typing "Maigret" it will find all programmes that feature him in the next two weeks.
