1. Introduction. The 2012 Protocol to the United States–Canada Great Lakes Water Quality Agreement (GLWQA) calls for the review and revision of nutrient-related targets for the Great Lakes, including the establishment of nearshore and offshore water quality and tributary concentrations or loadings goals in order to meet the General and Specific Objectives as outlined in the Agreement.

Total and soluble reactive phosphorus loadings to Lake

ABSTRACT. Mathematical models used to simulate the water quality and the processes of self-purification of water bodies are important tools to support effective water resource management.

In mathematics, a spline is a function defined piecewise by polynomials. In interpolating problems, spline interpolation is often preferred to polynomial interpolation because it yields similar results, even when using low degree polynomials, while avoiding Runge's phenomenon for higher degrees. In the computer science subfields of computer-aided design and computer graphics, the term spline ...

In the mid-1800s, the agricultural chemist Justus von Liebig demonstrated strong positive relationships between soil nutrient supplies and the growth yields of terrestrial plants, and it has since been found that freshwater and marine plants are equally responsive to nutrient inputs.

What is WileyPLUS? WileyPLUS is a research-based online learning environment designed to help students succeed. WileyPLUS courses are designed to provide students with online assignments, study help, and further resources to support a specific textbook.

Fundamentals of Heat and Mass Transfer, 8e WileyPLUS

This text is an unbound, binder-ready edition. Introduction to Heat and Mass Transfer is the gold standard of heat transfer pedagogy for more than 30 years, with a commitment to continuous improvement by four authors having more than 150 years of combined experience in heat transfer education, research and practice.

Fundamentals of Heat and Mass Transfer: Theodore L

Flame and effective gas temperatures are key variables that need to be accurately determined before analysis of heat transfer in the radiant section of fired heaters can be meaningfully undertaken. To facilitate the calculation of these temperatures, appropriate equations were derived using two Computer Matlab

programmes specially written for the purpose.
