

chapter 7 circular motion pdf

In physics, circular motion is a movement of an object along the circumference of a circle or rotation along a circular path. It can be uniform, with constant angular rate of rotation and constant speed, or non-uniform with a changing rate of rotation. The rotation around a fixed axis of a three-dimensional body involves circular motion of its parts. The equations of motion describe the ...

Circular motion - Wikipedia

Figure 13.2 Detailed motion of the vibrating spring. 13.2 we obtain $a = -\omega^2 x$ A m The mass continues to move toward the left while the acceleration continuously decreases. At the equilibrium position, figure 13.2(b), $x = 0$ and hence, from equation 13.2, the acceleration is also zero.

Linear motion (also called rectilinear motion) is a one-dimensional motion along a straight line, and can therefore be described mathematically using only one spatial dimension. The linear motion can be of two types: uniform linear motion with constant velocity or zero acceleration; non uniform linear motion with variable velocity or non-zero acceleration.
