These animations are from the examples/ASPHERE sub-directory of the LAMMPS distribution and are described in examples/ASPHERE/README. They are animations of the various kinds of aspherical models LAMMPS supports, namely point ellipsoids, rigid bodies, and generalized aspherical particles made of line/triangle facets in 2d/3d.

The International Journal of Solids and Structures has as its objective the publication and dissemination of original research in Mechanics of Solids and Structures as a field of Applied Science and Engineering. It fosters thus the exchange of ideas among workers in different parts of the world and also among workers who emphasize different aspects of the foundations and applications of the field.

In the physical sciences, a particle (or corpuscle in older texts) is a small localized object to which can be ascribed several physical or chemical properties such as volume, density or mass. They vary greatly in size or quantity, from subatomic particles like the electron, to microscopic particles like atoms and molecules, to macroscopic particles like powders and other granular materials.
