A junk head is a form of piston engine cylinder head, where the head is formed by a dummy piston mounted  
inside the top of the cylinder. In most other engine designs, the cylinder head is mounted on top of the  
cylinder block. That form has also been termed a "poultice head". It is obviously essential for any piston engine  
to seal the joint between block and head.

### **Junk head - Wikipedia**

A head gasket is a gasket that sits between the engine block and cylinder head(s) in an internal combustion  
engine.. Its purpose is to seal the cylinders to ensure maximum compression and avoid leakage of coolant or  
engine oil into the cylinders; as such, it is the most critical sealing application in any engine, and, as part of  
the combustion chamber, it shares the same strength requirements ...
