formulations representative of processing techniques in these two categories. We also introduce the concept of fuzzy image processing and develop several new M-functions for their implementation. In order to carry a consistent theme, most of the examples in this chapter are related to image enhancement.

Digital image processing deals with manipulation of digital images through a digital computer. It is a subfield of signals and systems but focus particularly on images. DIP focuses on developing a computer system that is able to perform processing on an image.
