Power-system protection is a branch of electrical power engineering that deals with the protection of electrical power systems from faults through the isolation of faulted parts from the rest of the electrical network. The objective of a protection scheme is to keep the power system stable by isolating only the components that are under fault, whilst leaving as much of the network as possible ...

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

1. Introduction. Complex Network Analysis (CNA) is a relatively young field of research. The first systematic studies appeared in the late 1990s , , , having the goal of studying the properties of large networks that behave as complex systems. The research owes a great deal of its foundations to the seminal work on Random Graphs of Erdős and Renyi , who studied asymptotic properties of ...
