It shouldn't take a lot of imagination to see how the upper bound helps you pick good points to evaluate. For instance, if you selected the max upper bound as the next iterate you would already get pretty close to the global maximizer.

### **dlib C++ Library: A Global Optimization Algorithm Worth Using**

Since the last dlib release, I've been working on adding easy to use deep metric learning tooling to dlib. Deep metric learning is useful for a lot of things, but the most popular application is face recognition.

### **dlib C++ Library: High Quality Face Recognition with Deep**

LFW Results by Category Results in red indicate methods accepted but not yet published (e.g. accepted to an upcoming conference). Results in green indicate commercial recognition systems whose algorithms have not been published and peer-reviewed. We emphasize that researchers should not be compelled to compare against either of these types of results.

The following list of C++ template libraries details the various libraries of templates available for the C++ programming language.. The choice of a typical library depends on a diverse range of requirements such as: desired features (e.g.: large dimensional linear algebra, parallel computation, partial differential equations), commercial/opensource nature, readability of API, portability or ...

### **List of C++ template libraries - Wikipedia**

Given a transformation between input and output values, described by a mathematical function  $f$ , optimization deals with generating and selecting a best solution from some set of available alternatives, by systematically choosing input values from within an allowed set, computing the output of the function, and recording the best output values found during the process.
