A medical abortion is a type of non-surgical abortion in which medication is used to bring about abortion. An oral preparation for medical abortion is commonly referred to as an abortion pill. Medical abortion became an alternative method of abortion with the availability of prostaglandin analogs in the 1970s and the antiprogesterone mifepristone (also known as RU-486) in the 1980s.

A retractor is a surgical instrument used to separate the edges of a surgical incision or wound, or to hold back

underlying organs and tissues so that body parts under the incision may be accessed. The general term retractor usually describes a simple handheld steel tool possessing a curved, hooked, or angled blade and fitted with a comfortable handle, that when in place maintains the desired ...
