The engineering design process is a methodical series of steps that engineers use in creating functional products and processes. The process is highly iterative - parts of the process often need to be repeated many times before another can be entered - though the part(s) that get iterated and the number of such cycles in any given project may vary. ...

9.SHOP PRACTICES. Knowing about good electronic shop practices begins with introduction to the basic tools and test instruments used in electronic repair, production and troubleshooting. It continues with "hands-on" activity directed towards learning practical skills such as soldering and de-soldering and making connecting leads and cables.
