

**evolution futuyma 3rd edition pdf**

Evolution is change in the heritable characteristics of biological populations over successive generations. Evolutionary processes give rise to biodiversity at every level of biological organisation, including the levels of species, individual organisms, and molecules.

**Evolution - Wikipedia**

Evolution is the process of change in all forms of life over generations, and evolutionary biology is the study of how evolution occurs. Biological populations evolve through genetic changes that correspond to changes in the organisms' observable traits.

**Introduction to evolution - Wikipedia**

Charles Darwin championed the theory of common descent and evolution by natural selection among descendants with slight variations on the ancestors' features.
