Flow velocity. The solution of the Navier–Stokes equations is a flow velocity. It is a field, since it is defined at every point in a region of space and an interval of time.

Question of the Week, 1.3.2011. Although first formulated in the 19th century, our knowledge of the Navier-Stokes equations remains minimal. These basic equations of fluid mechanics describe gas and liquid flow and can be derived by invoking conservation of momentum, mass, and energy for a continuum fluid.

Are there smooth and globally defined solutions to the

1.. Introduction In this paper we introduce a new method for the analysis of problems governed by partial differential equations such as, for example, solids, structures and fluids.

This code shows how to compute the source terms in the method of manufactured solutions (MMS) for the 2D Navier-Stokes equations. Any function can be made an exact solution to the 2D Navier-Stokes equations with suitable source terms.

In fluid dynamics, the Euler equations are a set of quasilinear hyperbolic equations governing adiabatic and inviscid flow. They are named after Leonhard Euler. The equations represent Cauchy equations of conservation of mass (continuity), and balance of momentum and energy, and can be seen as particular Navier–Stokes equations with zero viscosity and zero thermal conductivity.

Euler equations (fluid dynamics) - Wikipedia

The Navier-Stokes equations capture in a few succinct terms one of the most ubiquitous features of the physical world: the flow of fluids. The equations, which date to the 1820s, are today used to model everything from ocean currents to turbulence in the wake of an airplane to the flow of blood in the heart.

Abstract: We consider an attraction-repulsion chemotaxis model coupled with the Navier-Stokes system. This model describes the interaction between a type of cells (e.g., bacteria), which proliferate following a logistic law, and two chemical signals produced by the cells themselves that degraded at a constant rate.

Basic to all of these applications is the fact that heat transfer processes for buildings are usually ill defined, time dependent, multi-dimensional, and in many cases non-linear.

In this comment we address the preprint of Jha and Hirata (arXiv:1809.10316 [physics.chem-ph]) which claims "Numerical Evidence Falsifying Finite-Temperature Many-Body Perturbation Theory." We agree that finite difference differentiation of the exact grand potential is the correct way to verify the terms in the perturbation expansion.

Il Fisico Italiano Massimo Corbucci ha collaborato con il GSI di Darmstadt per trovare la ragione dell'impossibilità di sintesi dell'atomo trans-Uranico di numero atomico 114. La Fisica e la Matematica sono due discipline che si differenziano l'una dall'altra per il fatto di occuparsi di oggetti fisici reali, la prima, e di puri concetti astratti, la seconda.
