In mathematics, the fundamental theorem of linear algebra makes several statements regarding vector spaces. Those statements may be given concretely in terms of the rank r of an $m \times n$ matrix A and its singular value decomposition: = First, each matrix A (has rows and columns) induces four fundamental subspaces. These fundamental subspaces are as follows:

Fundamental theorem of linear algebra - Wikipedia

In mathematics, and more specifically in linear algebra and functional analysis, the kernel (also known as null space or nullspace) of a linear map $L : V \rightarrow W$ between two vector spaces V and W , is the set of all elements v of V for which $L(v) = 0$, where 0 denotes the zero vector in W . That is, in set-builder notation, $\text{ker } L = \{v \in V \mid L(v) = 0\}$.
