DSC isothermal polymer crystallization kinetics measurements and the use of the Avrami equation to fit the data: Guidelines to avoid common problems

DSC isothermal polymer crystallization kinetics

In polymer physics, spherulites (from Greek sphaira = ball and lithos = stone) are spherical semicrystalline regions inside non-branched linear polymers. Their formation is associated with crystallization of polymers from the melt and is controlled by several parameters such as the number of nucleation sites, structure of the polymer molecules, cooling rate, etc. Depending on those parameters ...

An electrolytic capacitor (e-cap) is a polarized capacitor whose anode or positive plate is made of a metal that forms an insulating oxide layer through anodization. This oxide layer acts as the dielectric of the capacitor. A solid, liquid, or gel electrolyte covers the surface of this oxide layer, serving as the or negative plate of the capacitor. Due to their very thin dielectric oxide layer ...

Bachelor of Science in Chemical Engineering. The Chemical Engineering B.S. program requires basic courses in biology, chemistry, engineering, mathematics, and physics.

Chemical Engineering | Stanford University

Damproofing And Waterproofing. Damproofing And Waterproofing are important for maintaining concrete. A popular finish material for both the interior and exterior of structures, concrete offers both aesthetic qualities and structural capabilities.
