Soil pH is a measure of the acidity or basicity (alkalinity) of a soil. pH is defined as the negative logarithm (base 10) of the activity of hydronium ions (H^+ or, more precisely, $H_3O^+_{aq}$) in a solution. In soils, it is measured in a slurry of soil mixed with water (or a salt solution, such as 0.01 M $CaCl_2$), and normally falls between 3 and 10, with 7 being neutral.

Soil pH - Wikipedia

Learn about the twelve soil orders from the Department of Soils and Water Systems as part of the College of Agricultural and Life Sciences at the University of Idaho.

This handbook provides a summary of research-based recommendations and an overview of Arkansas soybean production.

Arkansas Soybean Production Handbook - MP197

Data drawn from a global compilation of studies quantitatively confirm the long-articulated contention that erosion rates from conventionally plowed agricultural fields average 1â€™2 orders of magnitude greater than rates of soil production, erosion under native vegetation, and long-term geological erosion. The general equivalence of the latter indicates that, considered globally, hillslope ...
