

### **how organisms interact in pdf**

Interaction is a kind of action that occur as two or more objects have an effect upon one another. The idea of a two-way effect is essential in the concept of interaction, as opposed to a one-way causal effect. A closely related term is interconnectivity, which deals with the interactions of interactions within systems: combinations of many simple interactions can lead to surprising emergent ...

In biology, an organism (from Greek:  $\acute{\alpha}\nu\omicron\mu\acute{\iota}\sigma\mu\alpha$ ,  $\acute{\alpha}\nu\omicron\mu\acute{\iota}\sigma\mu\alpha$ , organismos) is any individual entity that exhibits the properties of life. It is a synonym for "life form". Organisms are classified by taxonomy into specified groups such as the multicellular animals, plants, and fungi; or unicellular microorganisms such as a protists, bacteria, and archaea. All types of organisms are capable of ...

The stratospheric ozone layer is Earth's "sunscreen" protecting living things from too much ultraviolet radiation from the sun. The emission of ozone depleting substances has been damaging the ozone layer.

Plastic debris at the micro-, and potentially also the nano-scale, are widespread in the environment. Microplastics have accumulated in oceans and sediments worldwide in recent years, with maximum concentrations reaching 100 000 particles m<sup>3</sup>. Due to their small size, microplastics may be ingested by low trophic fauna, with uncertain consequences for the health of the organism.

### **The physical impacts of microplastics on marine organisms**

DNA sequences can be used to generate phylogenetic trees "diagrams of relatedness among organisms. Download the accompanying PDF worksheet for students to complete as they go through the Click and Learn. Comparing features of a 4.4-million-year-old fossil skeleton to those of human and chimpanzee ...

Plastic contamination is an increasing environmental problem in marine systems where it has spread globally to even the most remote habitats. Plastic pieces in smaller size scales, microplastics (particles <5 mm), have reached high densities (e.g., 100 000 items per m<sup>3</sup>) in waters and sediments, and are interacting with organisms and the environment in a variety of ways.
