

human evolution and culture pdf

Human evolution is the evolutionary process that led to the emergence of anatomically modern humans, beginning with the evolutionary history of primates – in particular genus Homo – and leading to the emergence of Homo sapiens as a distinct species of the hominid family, the great apes. This process involved the gradual development of traits such as human bipedalism and language, as well as ...

Becoming Human

In common usage, the word "human" generally refers to the only extant species of the genus Homo – anatomically and behaviorally modern Homo sapiens.. In scientific terms, the meanings of "hominid" and "hominin" have changed during the recent decades with advances in the discovery and study of the fossil ancestors of modern humans. The previously clear boundary between humans and apes has ...

Human - Wikipedia

Both genetic variation and certain culturally transmitted phenotypes show geographic signatures of human demographic history. As a result of the human cultural predisposition to migrate to new areas, humans have adapted to a large number of different environments.

Worldwide genetic and cultural change in human evolution

Edward B. Tylor's Primitive Culture articulates one of two major theories of culture to emerge around 1870. His theory defines culture in descriptive terms as the "œcomplex whole" that makes up social ideas and institutions, and in this it helped to establish anthropology as a recognized science.

Peter Melville Logan, "œOn Culture: Edward B. Tylor's

A new study on stone tools from a site in India offers the latest challenge to the model of human evolution and migration that has dominated paleoanthropology, particularly in the West, for decades.
