Definition. In vitro (Latin: in glass; often not italicized in English) studies are conducted using components of an organism that have been isolated from their usual biological surroundings, such as microorganisms, cells, or biological molecules. For example, microorganisms or cells can be studied in artificial culture media, and proteins can be examined in solutions.

Cultured meat is meat produced by in vitro cultivation of animal cells, instead of from slaughtered animals. It is a form of cellular agriculture.. Cultured meat is produced using many of the same tissue engineering techniques traditionally used in regenerative medicine. The concept of cultured meat was popularized by Jason Matheny in the early 2000s after co-authoring a seminal paper on ...

BANANA PLANTLET PRODUCTION THROUGH TISSUE CULTURE

Three basic methods, namely, suspension culture in bacterial-grade dishes (), culture in methylcellulose semisolid media (), and culture in hanging drops (), are usually used to induce ES cells to form EBs (6, 9). In addition to above the three basic methods, methods using a round-bottomed 96-well plate and a conical tube are used to form EBs from a predetermined numbers of ES cells.
