The concepts that seeded nanotechnology were first discussed in 1959 by renowned physicist Richard Feynman in his talk There's Plenty of Room at the Bottom, in which he described the possibility of synthesis via direct manipulation of atoms. The term "nano-technology" was first used by Norio Taniguchi in 1974, though it was not widely known.

Introduction. Molecular motors use chemical energy and transform it into work, orchestrating myriad processes inside a cell. They are examples of active matter, i.e. entities that stay out of thermodynamic equilibrium by consuming energy in the environment (or internally stored) in order to move []. There is a growing interest in creating synthetic analogues, not only to reveal and understand ...
