PROBABILITY AND MATHEMATICAL STATISTICS

Probability theory is the branch of mathematics concerned with probability. Although there are several different probability interpretations, probability theory treats the concept in a rigorous mathematical manner by expressing it through a set of axioms. Typically these axioms formalise probability in terms of a probability space, which assigns a measure taking values between 0 and 1, termed ...

3 The survivor function or survivorship function, $S(t)$, is the complement to the CDF and is defined as follows: $S(t) = 1 - F(t)$ for continuous time; or $S(t) = P(T > t)$ for discrete time. The value of the survivor function for an individual is the probability that the event has not yet occurred at time t (continuous) or prior to the close of observation period m (discrete time).

The correct answer is 7.8%, obtained as follows: Out of 10,000 women, 100 have breast cancer; 80 of those 100 have positive mammographies. From the same 10,000 women, 9,900 will not have breast cancer and of those 9,900 women, 950 will also get positive mammographies.
