Simulink, developed by MathWorks, is a graphical programming environment for modeling, simulating and analyzing multidomain dynamical systems.Its primary interface is a graphical block diagramming tool and a customizable set of block libraries.It offers tight integration with the rest of the MATLAB environment and can either drive MATLAB or be scripted from it.

Simulink - Wikipedia
An example of a simple mechanism that can be modeled by a state machine is a turnstile. A turnstile, used to control access to subways and amusement park rides, is a gate with three rotating arms at waist height, one across the entryway.

Guidelines for Software Tool Qualification
Frequently, the lack of existing qualifiable COTS tools raises the question whether two separately developed and thus dissimilar tools that satisfy the same operational requirements may be used instead of a single tool, either to avoid the need for qualifying that tool or to serve as an alternative method for tool qualification.

I love MATLAB. It is so quick and easy to write software to do what you want. It has excellent debugging and profiling tools. It is cross platform, making code easy to share (assuming the other people have forked out for the not-so-cheap license).

What frustrates you about MATLAB? - MATLAB Answers
