Definition: A Jordan form matrix is a block diagonal matrix whose blocks are all Jordan blocks. For example, every diagonal $p \times p$ matrix is a Jordan form, with p 1×1 Jordan blocks.

Definition A block diagonal - Rice University

E is a Jordan matrix. Corollary. Let $A \in M_n(F)$. Assume that its characteristic polynomial is a product of linear polynomials. Then there exists a Jordan matrix J and an invertible matrix C such that $A = CJC^{-1}$. Notice that the Jordan matrix J (which is called a Jordan form of A) is not defined uniquely. For example, we can permute its Jordan blocks.
