Recent research suggests that drugs with the potential to enhance endogenous brain plasticity and repair may reduce acute brain damage and improve functional recovery in animal models of stroke, even when they are administered several hours after the ischemic event.<sup>18, 19</sup> One of these new drugs, which might combine neurovascular protection and repair effect, is citicoline.

**The Effects of Citicoline on Acute Ischemic Stroke: A**

Acute ischemic stroke (AIS) is a medical emergency, affecting 795,000 people in the United States each year. 1 x 1 Mozaffarian, D., Benjamin, E.J., Go, A.S....., and American Heart Association Statistics Committee and Stroke Statistics Subcommittee.

Palliative care. Palliative care is an important component of comprehensive stroke care. Some patients with

severe strokes die during the initial hospitalization, others will be severely disabled and palliative care can begin to address the patient's and family's short- and long-term needs.

A stroke is a medical condition in which poor blood flow to the brain results in cell death. There are two main types of stroke: ischemic, due to lack of blood flow, and hemorrhagic, due to bleeding. They result in part of the brain not functioning properly. Signs and symptoms of a stroke may include an inability to move or feel on one side of the body, problems understanding or speaking ...

BACKGROUND AND PURPOSE: Hypotension and bradycardia are common in carotid artery stenting (CAS) and are particularly worrisome in the high risk patient who is typically referred for CAS. The purpose of this work was to assess the incidence and predictors of hypotension and bradycardia and the risk of their delayed occurrence after CAS.
