The cytidyl transferase IspD is a key enzyme in the methylerythritol phosphate (MEP) pathway for early isoprenoid biosynthesis. As an essential enzyme present in many human pathogens, it is a promising target for the development of new antimicrobial agents.

In chemistry, an organic compound is generally any chemical compound that contains carbon. Due to carbon's ability to catenate (form chains with other carbon atoms), millions of organic compounds are known. Study of the properties and synthesis of organic compounds is the discipline known as organic chemistry. For historical reasons, a few classes of carbon-containing compounds (e.g., carbonates ...

<< Dienes | Aromatics | Aromatic reactions >>. After understanding the usefulness of unsaturated compound, or conjugated system, we hope to explore the unique structure of aromatic compounds, including why benzene should not be called 1,3,5-cyclohexatriene because it is more stable than a typical triene, and seemingly unreactive. Called "aromatic" initially because of its fragrance, aromaticity ...

Organic synthesis is a special branch of chemical synthesis and is concerned with the intentional construction of organic compounds. Organic molecules are often more complex than inorganic compounds, and their synthesis has developed into one of the most important branches of organic chemistry. There are several main areas of research within the general area of organic synthesis: total ...
