Understanding Parkinson's. There is a lot to know about Parkinson's disease. Learn about symptoms, how it is diagnosed and what treatment options are available.

### **Parkinson's Foundation: Better Lives. Together.**

Parkinson's disease (PD) is a type of movement disorder. It happens when nerve cells in the brain don't produce enough of a brain chemical called dopamine. Sometimes it is genetic, but most cases do not seem to run in families.

### **Parkinson's Disease | PD | MedlinePlus**

Parkinson's disease (PD) is a long-term degenerative disorder of the central nervous system that mainly affects the motor system. The symptoms generally come on slowly over time. Early in the disease, the most obvious are shaking, rigidity, slowness of movement, and difficulty with walking. Thinking and behavioral problems may also occur. Dementia becomes common in the advanced stages of the ...

### **Parkinson's disease - Wikipedia**

Parkinson's disease (PD) is a movement disorder that is degenerative and chronic, and symptoms continue and generally worsen over time. The National Institute of Neurological Disorders and Stroke (NINDS) estimates about 50,000 people are diagnosed with PD each year in the U.S.

### **Parkinson's Disease Quiz: Symptoms & Early Signs of**

Parkinson disease affects more than 1 million people in North America and more than 4 million people worldwide. In the United States, Parkinson disease occurs in approximately 13 per 100,000 people, and about 60,000 new cases are identified each year. The late-onset form is the most common type of Parkinson disease, and the risk of developing this condition increases with age.

### **Parkinson disease - Genetics Home Reference - NIH**

Signs and symptoms of Parkinson's disease are varied. Parkinson's disease affects movement, producing motor symptoms. Non-motor symptoms, which include dysautonomia, cognitive and neurobehavioral problems, and sensory and sleep difficulties, are also common. When other diseases mimic Parkinson's disease, they are categorized as parkinsonism

### **PARKINSON'S DISEASE DISABILITY BENEFITS QUESTIONNAIRE**

What causes the disease? Parkinson's disease occurs when nerve cells, or neurons, in the brain die or become impaired. Although many brain areas are affected, the most common symptoms result from the loss of neurons in an area near the base of the brain called the substantia nigra. Normally, the neurons in this area produce an important brain chemical known as dopamine.
