The Information Assurance (IA) mission at the National Security Agency (NSA) serves a role unlike that of any other U.S. Government entity. National Security Directive (NSD) 42 authorizes NSA to secure National Security Systems, which includes systems that handle classified information or are otherwise critical to military or intelligence activities.

In cryptography, a web of trust is a concept used in PGP, GnuPG, and other OpenPGP-compatible systems to establish the authenticity of the binding between a public key and its owner. Its decentralized trust model is an alternative to the centralized trust model of a public key infrastructure (PKI), which relies exclusively on a certificate authority (or a hierarchy of such).
