Point of care testing (POCT) refers to laboratory testing that occurs near to the patient, often at the patient bedside. POCT can be advantageous in situations requiring rapid turnaround time of test results for clinical decision making.

### **Practical challenges related to point of care testing**

Software testing is an investigation conducted to provide stakeholders with information about the quality of the software product or service under test. Software testing can also provide an objective, independent view of the software to allow the business to appreciate and understand the risks of software implementation.

I've read various articles about mocking vs stubbing in testing, including Martin Fowler's Mocks Aren't Stubs, but still don't understand the difference.

## **testing - What's the difference between a mock & stub**

The Waterfall Model was first Process Model to be introduced. It is also referred to as a linear-sequential life cycle model.. It is very simple to understand and use. In a waterfall model, each phase must be completed fully before the next phase can begin.
