This is the key issue in Process Dynamics. It is also why Process Dynamics is the usual precursor to a study of Process Control. To assist in this study of process dynamics, it is important to have some sort of quantitative assessment of process behavior; this is usually in the form of a mathematical model.

Building a System Dynamics Model is a series of papers written to demystify the model building process. This paper is the first in the series and explains the first stage of the model building process called conceptualization . The paper examines in depth the following steps of conceptualization: 1. Define the purpose of the model. 2.
