In this course, instructor Haydn Thomas walks through the benefits of using process modeling to help make sense of your organization's business activities and see how they interconnect. Haydn defines business process modeling, covers the most commonly used business process modeling diagrams"œœcontext, functional flow, cross-functional flow, and flowchart"œœand explains when, why, and how to ...

Overview. System dynamics is a methodology and mathematical modeling technique to frame, understand, and discuss complex issues and problems. Originally developed in the 1950s to help corporate managers improve their understanding of industrial processes, SD is currently being used throughout the public and private sector for policy analysis and design.

Deterministic modeling process is presented in the context of linear programs (LP). LP models are easy to solve computationally and have a wide range of applications in diverse fields. This site provides solution algorithms and the needed sensitivity analysis since the solution to a practical problem is not complete with the mere determination of the optimal solution.
