

### **radio frequency integrated circuits pdf**

A tuned radio frequency receiver (or TRF receiver) is a type of radio receiver that is composed of one or more tuned radio frequency (RF) amplifier stages followed by a detector (demodulator) circuit to extract the audio signal and usually an audio frequency amplifier. This type of receiver was popular in the 1920s. Early examples could be tedious to operate because when tuning in a station ...

History. Since the earliest days of radio communications, the negative effects of interference from both intentional and unintentional transmissions have been felt and the need to manage the radio frequency spectrum became apparent.

Figure 6f: You can calculate the equivalent parallel capacitance of an inductor based on the published "self-resonance" frequency or you can use a simple test circuit to actually measure the resonance frequency in PDF Figure 6e of a coil. Figure 6f lists the characteristics of some typical coils.
