In statistics, a generalized additive model (GAM) is a generalized linear model in which the linear predictor depends linearly on unknown smooth functions of some predictor variables, and interest focuses on inference about these smooth functions. GAMs were originally developed by Trevor Hastie and Robert Tibshirani to blend properties of generalized linear models with additive models.

Documents SAS/IML software, which provides a flexible programming language that enables novice or experienced programmers to perform data and matrix manipulation, statistical analysis, numerical analysis, and nonlinear optimization.

SAS/IML(R) 9.2 User's Guide

In probability theory and statistics, a Gaussian process is a stochastic process (a collection of random variables indexed by time or space), such that every finite collection of those random variables has a multivariate normal distribution, i.e. every finite linear combination of them is normally distributed. The distribution of a Gaussian process is the joint distribution of all those ...

Gaussian process - Wikipedia

Datasets and evalautions. I belive that computer vision is advanced by careful evaluation and comparison. Consequently I have been involved in building several public datasets and evaluation websites.

Gaussian Processes and Kernel Methods Gaussian processes are non-parametric distributions useful for doing Bayesian inference and learning on unknown functions. They can be used for non-linear regression, time-series modelling, classification, and many other problems.

Story. Doing Data Science Exercises Without Data Cleaning and Coding. So as a data scientists/data

journalist/information designer, who is about to teach university courses, I asked is it possible to teach and introductory level class that does not require first learning a lot about data cleaning and coding?

Main Conference Program Guide. PDF: [\(link\)](#)Word: [\(link\)](#)At-a-Glance Summary: [\(link\)](#)Acceptance Statistics. This year, we received a record 2680 valid submissions to the main conference, of which 2620 were fully reviewed (the others were either administratively rejected for technical or ethical reasons or withdrawn before review).

CVPR2017

I think retraction of papers that report uncorrected statistics is a bit much to ask for; after all, most of the results that were published in the days before rigid statistical corrections were common have turned out to replicate, and indeed large-scale meta-analyses have shown a good degree of consistency, at least in the sets of regions that activate for broad task contrasts.

Dilemma flawed neuroimaging papers | Daniel Bor

1. Introduction. Auditing is valued for its ability to provide independent assurance of the credibility of accounting information, which improves resource allocation and contracting efficiency.
