The State of the World's Land and Water Resources for Food and Agriculture This flagship report analyses a variety of options for overcoming constraints and improving resource management in areas of heightened risk.

Land & Water - Food and Agriculture Organization

The rate and quantity of evaporation from the soil surface is a complicated process affected by many soil characteristics, tillage and environmental interactions (Lal & Shukla, 2004). Under conservation tillage, higher

water content in the topsoil and more plant residues on the soil surface, resulting in declined evaporation, have been linked with the lower soil temperature (Rasmussen, 1999).

Conservation tillage impacts on soil, crop and the
