How to Calculate Velocity. In this Article: Article Summary Finding Average Velocity Finding Velocity from Acceleration Circular Velocity Community Q&A References Velocity is an object's speed in a particular direction. Mathematically, velocity is often described as the change in position over the change in time.

Nerve conduction velocity is an important aspect of nerve conduction studies. It is the speed at which an electrochemical impulse propagates down a neural pathway. Conduction velocities are affected by a wide array of factors, including age, sex, and various medical conditions.

What I forgot to say: the method I described sort of seamlessly transitions between the delta-time and delta-position modes, while minimizing the main source of noise in both; you will never measure the time of a number of events +/- 1 which causes problems at low speed, or intervals of events of +/- 1 cycle, which causes problems at high speed.

FTL travel of non-information. In the context of this article, FTL is the transmission of information or matter faster than c , a constant equal to the speed of light in a vacuum, which is 299,792,458 m/s (by definition of the meter) or about 186,282.397 miles per second. This is not quite the same as traveling faster than light, since:

How to Calculate Escape Velocity. In this Article: Article Summary Understanding Escape Velocity
Calculating Escape Velocity Community Q&A 7 References The escape velocity is the velocity necessary for an object to overcome the gravitational pull of the planet that object is on. For example, a rocket going into space needs to reach the escape velocity in order to make it off Earth and get into ...
