Off-Stoichiometry Thiol-Enes (OSTE) polymers. For Self-assembled monolayer SAM photoresist, first a SAM is formed on the substrate by self-assembly. Then, this surface covered by SAM is irradiated through a mask, similar to other photoresist, which generates a photo-patterned sample in the irradiated areas.

Defects, surfaces and interfaces play a major role in the transport and catalytic properties of functional materials. This symposium will focus on strategies to understand and control the functional properties of ionic and mixed conducting materials, with a view toward their application in solid state devices, such as batteries, solid oxide ...
