VyOS is an open source network operating system based on Debian GNU/Linux.. VyOS provides a free routing platform that competes directly with other commercially available solutions from well known network providers. Because VyOS is run on standard amd64, i586 and ARM systems, it is able to be used as a router and firewall platform for cloud deployments.

VyOS - Wikipedia

AppleTalk is a discontinued proprietary suite of networking protocols developed by Apple Inc. for their Macintosh computers. AppleTalk includes a number of features that allow local area networks to be connected with no prior setup or the need for a centralized router or server of any sort. Connected AppleTalk-equipped systems automatically assign addresses, update the distributed namespace ...

AppleTalk - Wikipedia

Since we can tell COSMOS exactly which command and telemetry files to parse we can control how the target cmd/tlm definitions get built. This is useful if you have a target with slightly different command and telemetry definitions.
