

unit equations in diophantine pdf

In mathematics, a polynomial is an expression consisting of variables (also called indeterminates) and coefficients, that involves only the operations of addition, subtraction, multiplication, and non-negative integer exponents of variables. An example of a polynomial of a single indeterminate, x , is $x^2 + 4x + 7$. An example in three variables is $x^3 + 2xyz^2 + yz + 1$.

Polynomial - Wikipedia

In algebra, a cubic function is a function of the form $f(x) = ax^3 + bx^2 + cx + d$ in which a is nonzero. Setting $f(x) = 0$ produces a cubic equation of the form $ax^3 + bx^2 + cx + d = 0$. The solutions of this equation are called roots of the polynomial $f(x)$. If all of the coefficients a , b , c , and d of the cubic equation are real numbers, then it has at least one real root (this is true for all odd degree polynomials).
