In this paper, the term AWESs (Airborne Wind Energy Systems) is used to identify the whole electro-mechanical machines that transform the kinetic energy of wind into electrical energy.

Airborne Wind Energy Systems: A review of the technologies

Research highlights Replacing world energy with wind, water, and sun (WWS) reduces world power demand 30%. WWS for world requires only 0.41% and 0.51% more world land for footprint and spacing, respectively. Practical to provide 100% new energy with WWS by 2030 and replace existing energy by 2050.

Providing all global energy with wind, water, and solar

Green-e is the trusted global leader in clean energy certification. We make it easy for businesses and individuals to purchase verified clean energy with confidence, and for consumers to choose sustainable products and services.

This post reviews the weird and wonderful world of high altitude wind power. It looks into the reasons for wanting to go high, explains tethered flight and explores the main competing technologies of 1) airborne generation (Google Makani) and 2) ground based generation (KiteGen) and compares their strengths and weaknesses.

High Altitude Wind Power Reviewed | Energy Matters

Renewable energy commercialization involves the deployment of three generations of renewable energy technologies dating back more than 100 years. First-generation technologies, which are already mature and economically competitive, include biomass, hydroelectricity, geothermal power and heat. Second-generation technologies are market-ready and are being deployed at the present time; they ...

Renewable energy commercialization - Wikipedia

The Cape Wind Project was a proposed offshore wind farm on Horseshoe Shoal in Nantucket Sound off Cape Cod, Massachusetts, United States. It was approved but then lost several key contracts and suffered from several licensing and legislative setbacks. The developer, Jim Gordon of Energy Management Inc, eventually terminated the lease rights for the site in late 2017.

Cape Wind - Wikipedia

Hinkley still scores on reliability and low carbon but the extent to which its costs are obscene is now plainer than ever. In Monday's capacity auction, two big offshore wind farms came in at £57.50 per megawatt hour and a third at £74.75.
